Summary

Product Designer and Computer Science student at the University of Houston passionate about creating intuitive, accessible, and user-centered digital experiences. Experienced in end-to-end product design including user research, information architecture, wireframing, interaction design, high-fidelity prototyping, usability testing, and design systems. Skilled at translating business goals and user needs into scalable web and mobile products using Figma, React, and TypeScript. Passionate about building products that combine thoughtful design with strong engineering and seeking Product Design, UI/UX Design, UX Engineering, and Product Design Internship opportunities.

Education

Bachelor of Science in Computer Science

University of Houston

Minor: Population Health (Health Informatics)

Expected May 2027

GPA: 3.6

Technical Skills

Product Design: User-Centered Design, Design Thinking, Product Discovery, UX Research, Competitive Analysis, User Personas, Journey Mapping, Information Architecture, User Flows

UI/UX Design: Wireframing, Low-Fidelity Prototypes, High-Fidelity Prototypes, Interaction Design, Visual Design, Responsive Design, Mobile Design, Accessibility (WCAG), Microinteractions, Usability Testing

Design Systems: Component Libraries, Auto Layout, Variables, Design Tokens, Reusable Components

Design Tools: Figma, FigJam, Adobe Photoshop, Adobe Illustrator, Adobe XD, Framer, Miro, Notion

Frontend: React, React Native, TypeScript, JavaScript, HTML5, CSS3

Backend: FastAPI, Flask, REST APIs

Programming: Python, Java, C++, SQL

Tools: Git, GitHub, VS Code, Jira, Linear, Slack

Cloud: AWS Lambda, API Gateway, IAM, CloudWatch

Research Experience

Undergraduate Researcher UR2PhD Program – University of Houston Feb 2026 – May 2026

- Processed and analyzed large-scale turbulent flow simulation datasets using Python, NumPy, and Pandas to identify complex flow behaviors and extract quantitative features. Designed reproducible data processing pipelines for cleaning, transforming, and validating high-dimensional scientific datasets. Applied statistical analysis and regression techniques to evaluate flow characteristics and support research hypotheses. Developed scientific visualizations using ParaView and Python to communicate multidimensional data patterns.

Experience

Student Technology Assistant - University of Houston

Aug 2025 – Present

- Supported university technology systems by troubleshooting software, authentication, and account-related issues for thousands of students and staff. Investigated technical issues, documented resolutions, and collaborated with campus teams to improve service efficiency.

Teaching Assistant - Lone Star College

Aug 2023 – Dec 2024

- Mentored students in Python programming, SQL querying, debugging, and database concepts. Assisted students in developing data analysis and algorithmic problem-solving skills. Simplified complex programming concepts through one-on-one instruction and lab support.

Projects

DigitalUH – University of Houston Student Experience Platform

2026

React Native, TypeScript, Figma, Stitch, UI/UX Design, Product Design

- Led the end-to-end redesign of the University of Houston mobile experience by identifying usability pain points and reimagining campus services through a user-centered design process.
- Conducted competitive analysis, user research, journey mapping, and wireframing before creating 20+ high-fidelity mobile interfaces in Figma using reusable design system components.
- Designed AI-powered experiences including campus navigation, dining, shuttle tracking, scheduling, and personalized student assistance to improve task completion and reduce navigation complexity.
- Built production-ready React Native interfaces from design specifications while maintaining consistency between design and implementation through reusable components and scalable frontend architecture.

Fusion 36 Coffee Shop Website

2026

React, TypeScript, UI/UX Design, Frontend Development

- Partnered with a local business to transform business goals into an engaging digital customer experience through UX research, interface design, and frontend development.
- Designed complete customer journeys including menu exploration, ordering workflows, promotions, and brand storytelling with a responsive design system.
- Created reusable UI components, interactive drink customization experiences, and microinteractions that improved usability across desktop and mobile devices.
- Applied accessibility, typography, color systems, spacing, and visual hierarchy principles to create a modern, conversion-focused website.
