Summary

Computer Science student at the University of Houston with hands-on experience in AI-agent engineering, workflow automation, software development, and data-driven research. Skilled in Python, SQL, JavaScript, React, TypeScript, and n8n, with experience building user-focused digital products, troubleshooting technical issues, and analyzing complex datasets. Combines software engineering skills with a background in population health and medical informatics to develop practical, human-centered technology solutions. Seeking internship opportunities in software engineering, AI/automation, data analytics, or health technology.

Education

Bachelor of Science in Computer Science *Expected May 2027* University of Houston GPA: 3.6 **Minor:** Population Health (Medical Informatics)

Technical Skills

Programming: Python, Java, C++, SQL, JavaScript, TypeScript, HTML, CSS
AI & Data: n8n workflow automation, AI-agent workflows, REST APIs, Pandas, NumPy, data analysis, data visualization
Healthcare: Medical informatics, population health, healthcare analytics, health-data visualization, health disparities research
Development & Design: React, React Native, Expo, Flask, FastAPI, Git/GitHub, Supabase, Figma, wireframing, prototyping, responsive UI/UX

Research & Work Experience

Wayfair n8n AI Agent Engineering Externship Sep 2026 – Present

- Building AI-agent workflows with n8n to automate moodboard generation and explore consumer product trends, combining AI-driven visual generation with workflow automation. Developing a Consumer Trend Discovery AI Agent to identify emerging design trends using product and industry signals, with the goal of supporting data-driven merchandising and product decisions.
- Exploring competitor-monitoring workflows that analyze product listings, launches, pricing changes, and reviews to surface competitive insights and support business decisions. Learning to integrate trend and competitor reports into an automated market-intelligence dashboard for actionable insights and reporting.

Undergraduate Researcher – Population Health Consulting Project Sep 2026 – Present

- Analyze demographic, socioeconomic, and community-health information to identify health disparities and translate findings into clear visuals and evidence-based recommendations for a population-health client.

Student Technology Assistant – University of Houston Aug 2025 – Present

- Provide front-line technical support to students, faculty, and staff by diagnosing access, software, and system issues, explaining fixes clearly, and escalating complex problems to improve the user experience.

UI/UX Design Internship – AboveStandards APS May 2026 – Aug 2026

- Designed user-centered interfaces for AI-powered product experiences, translating product requirements and user needs into intuitive workflows, interaction patterns, and high-fidelity UI concepts. Created wireframes, interactive prototypes, and polished interface designs in Figma to communicate design concepts, explore alternatives, and support product iteration. Designed AI interaction flows with an emphasis on clear system feedback, intuitive navigation, transparent user actions, and reduced friction throughout the user journey.
- Applied visual hierarchy, typography, spacing, accessibility principles, and reusable design patterns to create consistent, responsive interfaces across product experiences. Refined interface concepts and prototypes by evaluating usability, interaction clarity, and design consistency while balancing user needs with product

Undergraduate Researcher – UR2PhD Program, University of Houston Feb 2026 – May 2026

- Analyzed research data with Python, Pandas, and NumPy and created scientific visualizations to investigate turbulent-flow patterns; collaborated with a research team to refine analysis workflows and communicate findings.

Teaching Assistant – Lone Star College Aug 2023 – Dec 2024

- Helped students troubleshoot Python, C++, SQL, and Excel problems; translated technical concepts into clear steps and guided users through debugging to resolve issues and build confidence with technology.

Projects

AccessPath – Accessibility-First Navigation Platform 2026 – Present *In Progress*
Figma, Accessibility Research, Interactive Mapping, Data Visualization

- Developing an accessibility-first navigation product that helps people with mobility and sensory disabilities evaluate routes based on individual needs, accessibility barriers, and the reliability of available location data.
- Benchmarking existing mapping applications to identify gaps in accessibility information, route comparison, and the visibility of changing real-world conditions. Designing user flows, map interfaces, accessibility filters, and route-comparison experiences in Figma, prioritizing inclusive design, clear information hierarchy, and intuitive navigation.
- Defining a location-reporting and data-freshness workflow to communicate verified accessibility details, recent reports, and potential route disruptions while distinguishing unknown conditions from confirmed barriers. Exploring a functional MVP that combines interactive maps, accessibility data, and route updates help users make more informed navigation decisions.

DigitalUH – University of Houston Student Technology Platform 2026
Figma, React Native, TypeScript, Expo, Supabase, REST APIs, Git

- Designed and developed a mobile-first student technology platform integrating scheduling, campus navigation, dining, transportation, student services, and personalized features into one cohesive digital experience.
- Identified usability challenges in existing campus technology and translated user needs into product concepts, information architecture, user flows, navigation structures, and interaction patterns. Created Figma prototypes and reusable UI components with consistent typography, spacing, colors, cards, buttons, navigation, and interaction patterns across multiple screens.
- Explored design alternatives and iterated on interfaces to improve usability, accessibility, information discovery, and task completion.
- Collaborated between design and implementation using React Native and TypeScript, balancing user needs, visual quality, technical feasibility, and product requirements.
- Communicated design decisions through structured workflows and visual concepts while evaluating feedback and refining the experience.

Fusion36 Coffee Shop Web Application Live Website 2026
Figma, React, TypeScript, JavaScript, HTML5, CSS3, Git

- Designed and developed a customer-facing digital product from concept through implementation, creating user flows for product discovery, product details, customization, and customer interactions.
- Applied visual hierarchy, typography, layout, color, whitespace, responsive design, and interaction design principles to create a cohesive experience across desktop and mobile.
- Designed interface concepts and prototypes in Figma and translated them into reusable React components while maintaining consistency across screens. Iterated on layouts and interactions through testing and implementation feedback, refining the experience for usability, visual quality, and technical feasibility.
